Abstract (en)  
[origin: EP2085348A1] Provided is an elevator controller in which a controller main body controls operation of a car and monitors presence of an abnormality of a brake torque of a brake device for braking running of the car. The controller main body judges whether or not an emergency operation is being performed upon detection of the abnormality of the brake torque when the car stops, and allows a door to be opened when the emergency operation is being performed and inhibits the door from being opened when a normal operation is being performed.
