Abstract (en)

The method involves introducing a part of solid mineral fractions in a mixture containing a binding agent e.g. bitumen, and the solid mineral fractions, where the part of the mineral fractions is previously and partially heated for attaining a temperature higher than 80 degree Celsius at the moment of input to the mixture. Separate and simultaneous introduction of the binding agent and the remaining non-heated part of the mineral fractions is carried out in the mixture. The part of the solid mineral fractions is divided into two parts, where one of the parts includes binder aggregates.

Abstract (fr)

L'invention concerne un procédé pour fabriquer un enrobé bitumineux comprenant des fractions solides minérales enrobées d'un liant, le procédé comprenant une étape de chauffage d'une partie desdites fractions solides minérales et une introduction séparée mais simultanée du liant et de la partie restante desdites fractions solides minérales. Application à la construction routière.
