Abstract (en)

[origin: EP2085529A2] A device (1) for providing a hydraulic seal and interconnection, particularly for two contiguous constructive segments (2a, 2b) of a building, comprising a plurality of modular elements (3) made of elastically deformable material, which can be mutually associated in series and are arranged so that their lateral surfaces (4a, 4b) face the constructive segments (2a, 2b), the modular elements (3) being closed in a vise-like configuration between at least two elements for interconnection and compression, which are arranged respectively adjacent to the upper surface (15) and the lower surface (17) of the modular elements (3).
