Abstract (en)
[origin: EP2085543A2] The lock i.e. three-latch lock (2), has a blocking element with a blocking section engaged in a free space, during locking of a main lock (3) and auxiliary locks (4), where the free space is defined by an attachment area. The blocking section has an attachment section that is attached to the attachment area, where the attachment section and the attachment area run obliquely to each other. A part of the blocking section including a part of the attachment section is guided in the free space, when lock latches (6, 9) are present between extended and retracted positions.
