Abstract (en)

[origin: EP2085699A2] The setting of a timer module (11) of an electrical cooking appliance (18) is locked against change by activating a safety lock function on the timer module using a control element (30) so that specific operating cycle of the electrical cooking appliance is carried out without interruption. The electrical cooking appliance is switched-off by opening timer relay (25) which is reactivated or closed only by activating an additional control element. An independent claim is also included for timer module.
