Abstract (en)
[origin: EP2085712A1] The air conditioner with a filter cleaning unit of the invention includes: a body casing 3; a heat exchanger 4 provided in mid-course of an air passage in the body casing 3; a filter 5 placed in correspondence to a primary side of air intake surfaces of the heat exchanger 4; a filter driving section 72 to which the filter 5 is fitted and which moves the filter 5 along the air intake surfaces of the heat exchanger 4; a filter detecting section LS provided at a specified position on a terminal-end side of filter movement paths 12a, 12b; a filter cleaning unit 6 for performing cleaning of a filter surface of the filter 5 in mid-course of the filter movement paths; and a fan 70 provided on a position of a secondary side of the heat exchanger 4. The filter detecting section LS is provided at a position which is corrected in correspondence to a deviation amount of a fitting position of the filter 5 that can occur due to a way of fitting of the filter 5 to the filter driving section 72, the position correction being done to an extent of the deviation amount in a direction from a terminal end P 0 of the filter movement paths toward inside of the filter movement paths.
