Abstract (en)

[origin: EP2085953A2] The arrangement has an illumination illuminated in a front of a passive display surface (1), where the illumination is formed with a transparent disk (4) arranged in the front of the surface and lies opposite to the surface. The surface is visible by the transparent disk, and luminescent lighting organic elements (6) e.g. organic LED, are formed on the surface. The organic elements emit the light in a region in the front of the surface. The organic elements are formed partly on a side (5) of the transparent disk turned towards the surface and are designed as light emitting organic elements.
