Abstract (en)
[origin: EP2086066A1] The device has a junction box in which motor lines (7) of an electric motor are connected with connecting lines of a power connector. An adapter (10) is arranged between the motor lines and the connecting lines, and is designed as an independent, replaceable connector. The adapter connects a single connecting line of the power connector with a single motor line (7a) of the electric motor. The adapter connects the lines with each other in a predetermined configuration based on its rotational position.
