Abstract (en)
[origin: WO2008054041A1] The present invention relates to a buckle. More particularly, the present invention is to provide a buckle enabling a belt, which is inserted through an inlet thereof, to be fastened between the upper fastening plate of the body and the elastic movable plate inside the body by installing the fastening plate respectively in the upper part and the lower part of the buckle and further installing the elastic movable plate, which has an arch shape that the center is convex, inside the buckle body.
