Abstract (en)  
[origin: WO2008049592A1] Glue application device with at least one glueing roller, which can be driven to rotate about its glueing roller axis, with at least one glue-depositing and distributing element for producing a primary glue deposit on a circumferential surface of the glueing roller, and with at least one glue scraper which, by way of a scraper portion having a pressing force produced by at least one spring element, bears pressed against a circumferential region of the glueing roller, this region extending in the direction of the roller axis and, in the direction of rotation of the glueing roller, following the point where the glue is dispensed.
