Abstract (en)  
[origin: WO2008065243A1] The invention relates to a process for producing a wood composite product comprising a first and a second board (1, 2). One takes such a first board (1), which is sawn out of a round log (8) so that the first side edge (6) is a wane edge (9) and so that the first even face (4) has a larger area than the second even face (5), and one takes such a second board (2), which is sawn out of a round log (8) so that the third side edge (14) is a wane edge (9) and so that the third even face (12) has a larger area than the fourth even face (13). One machines the first side edge (6) in order to achieve a first longitudinal bevelled side edge fraction (11) and one machines the third side edge (14) in order to achieve a second longitudinal bevelled side edge fraction (17) for interaction with the first longitudinal bevelled side edge fraction (11). The invention also relates to a wood composite product.
