Abstract (en)
[origin: WO2008052230A1] A track construction machine (1) consists of a machine frame (4) supported on rail-mounted travel units (2) and equipped with working assemblies for the processing of a track (3). Said machine frame has two frame parts (6, 7) which are connected to each other by a frame link (8) and an apparatus (9) arranged in the area of the frame link (8) for the stabilization of the machine frame (4). The apparatus (9) is coupled to the first frame part (6) by a drive (11) such that it pivots around a pivoting axis (13) which is parallel to one axis direction of the rail-mounted travel units (2). The apparatus (9) has a contact part (15) at one end (14) of the pivoting axis (13) for placement on the second frame part (7).
