Abstract (en)  
[origin: WO2008068261A1] Handle comprising a lever (5) which can rotate in a frame (1) to be fixed to the door (2) of a vehicle and which is mechanically connected to a rocker (11) which can rotate in the frame (1) and is provided with a shoulder (20) suitable to be intercepted by a stop piece (15) of a locking member comprising a pendulum (16) which is provided with an inertial mass (18) and is pivoted to the frame (1) or to a body integral therewith, so that during an oscillation of the pendulum (16) the stop piece (15) intercepts the shoulder (20) and prevents the complete rotation of the rocker (11), wherein the stop piece (15) and/or the shoulder (20) are provided with magnetic and/or ferromagnetic members (22, 23), so that when the stop piece (15) intercepts the shoulder (20) said magnetic and/or ferromagnetic members (22, 23) attract the stop piece (15) toward the shoulder (20).
