Abstract (en)
[origin: WO2008059548A1] A handle (1) for a leaf (2) provided with a locking device (50) suitable to selectively connect in a substantially rigid manner said leaf (2) to a respective frame (3); the handle (1) comprising a base (11) integrally couplable to a flat face of said leaf (2), a control device (20) carried by the base (11) and interfaceable with the locking device (50) to switch selectively the locking device (50) between respective closing and opening operative positions; the control device (20) comprising at least one switching member (21) coupled to the base (11) in a manner that is stable, selectively releasable and reassemblable at will, in order to allow maintenance operations safeguarding the functionality of the coupling between the base (11) and the switching member (21).
