Abstract (en)  
[origin: WO2008047039A1] The invention relates to a method for configuring an SAI parameter of a terminal for accessing a service supplied by a communication network (12). According to the invention, said method comprises, for a service accessible by means of a plurality of radio terminals forming an access network connected to the communication network: on reception of a request (20) for the configuration of the SAI parameter comprising a localisation indication of the radio terminal, a step of associating a geographical region with the radio terminal on the basis of said localisation indication; a step of dynamically allocating a pseudo value to the parameter, complying with the requirement of a single occurrence of the pseudo value in the geographical region; and on reception of a request for access to a service from said radio terminal, a step of converting the pseudo value into the possible value of the selected parameter into an SAI parameter value selected from a list of possible values, defined by the communication network for the geographical region.
