Abstract (en)

[origin: EP2087991A1] The method involves folding a continuous foil web in a longitudinal direction under formation of a web side piece, and providing the web with transverse aligned double-with connecting seams. Tobacco bags (10) are separated from the web, and are filled and closed. Closure units e.g. tape (18), coupon (20) and a sticker (21), are attached to the bag by adhesive for packaging of admixture e.g. cigarette paper. The tape, the coupon and the sticker are attached at an inner side of a wrapping lug (17) and/or at a bag-front wall (12), before filling the bags. An independent claim is also included for a device for manufacturing tobacco bags by separating a continuous web from packing material.
