Abstract (en)

[origin: EP2088104A1] The device (1) has a medium (6) for implementing a rotational translatory movement, where the printed products are collected during the rotational translatory movement by the respective medium. A transport device (A) is provided, by which the printed products are fed in a direction (4). The medium has a gripper (28), with which the printed products are clamped on a lower side and an upper side respectively during the rotational translatory movement.
