Abstract (en)

[origin: EP2088106A2] The winding device (1) has a winding core (7a) which has a perforation and an inner area (27) that is enclosed from a core wall (13). The inner area is coupled over a guide head with a unit for spreading a low-pressure. A sealing unit (19.1) is provided between the winding core and the guide head. The winding core is deformed with the guide head in radial direction.
