Abstract (en)
[origin: WO2008046787A1] The invention relates to an active ventilating device for arranging on a user's body (1), having a first fastening means (2), which is fitted on an item of clothing or a piece of equipment (10b) worn on the body, and a second fastening means (3a, 3b), which is fitted or supported on the body, and having means for generating an air flow (4a, 4b; 5a, 5b, 6a, 6b) which is directed onto the body or away from the body. The device is distinguished in that, by virtue of a movement-induced change in distance between the first and second fastening means (2; 3a, 3b), the means for generating an air flow (4a, 4b; 5a, 5b, 6a, 6b) are driven mechanically.
