Abstract (en)
[origin: US2008110787A1] An apparatus for creating a pocket structure includes a sheet configured to be folded upon itself such that a first panel of the sheet is disposed over one or more remaining panels of the sheet. A punched out portion is included in the first panel. The punched out portion may have a semi-circular, triangular, or rectangular shaped contour. The apparatus may further include a tapered out portion of the punched out portion adjacent to an upper edge of the first panel. The punched out portion may be spaced from an upper edge of the first panel by a distance between 1/5 and 1/3 the height of the first panel. The punched out portion may be centrally located between the side edges of the first panel. The sheet may further be configured to be folded along a plurality of folding lines which may be depicted on the sheet.
