Abstract (en)
[origin: WO2008022635A2] Bonding system or connecting system for a two-part tooth implant, with a first or distal implant part (120, 120', 120'') and a second or proximal implant part (110) which, when connected to each other, adjoin each other at least indirectly at a connection point and preferably have surfaces directed towards each other in the area of the connection point, wherein a connection element preferably in the form of a threaded sleeve (140, 140', 150) is formed in the first implant part, and, between the first implant part (120, 120', 120'') and the connection element (140, 140', 150), abutment surfaces (K, k, 121', 151) are provided which face each other and which, when the tooth implant is being assembled and when its assembly has been completed, transmit the assembly forces from the connection element (140, 140', 150) to the first implant part (120, 120', 120'').
