Abstract (en)
[origin: WO2008068380A1] The invention relates to a dental care unit and its device holder unit. In the device holder unit, there are device- places and the device-places are arranged such that the device holder unit can be fitted with different and/or different types of devices. Preferably, in a device hose, or in a device connected to a hose, there is a colour identifier, and the device-places of the device holder unit are provided with optical sensors capable of colour separation, which sensors are arranged to identify the colour identifier in question. The invention enables implementing the device order of the console such that places of the devices in the console are freely changeable.
