Abstract (en)

[origin: WO2008045465A1] Methods of utilizing a combined administration or a unit dosage of a combination of a dyslipidemic agent and omega-3 fatty acids for the reduction of apolipoprotein-B levels. The methods are especially useful in the treatment of patients with hypercholesterolemia, hypertriglyceridemia, mixed dyslipidemia, coronary heart disease (CHD), vascular disease, atherosclerotic disease and related conditions, and for the prevention or reduction of cardiovascular, cardiac, and vascular events.
