Abstract (en)
[origin: CA2565017A1] A card dealing structure that is preferably handheld and allows a user to manually advance a top card from a supply of cards provided in a recess of the structure. The user advances the top card to a card dispensing slot. A rotatable drive member in the card dispensing slot is activated to eject the card through the dispensing slot. Preferably the rotatable drive member is a foam wheel that allows some slippage of a card if the user exerts a drag force. The user, by exerting a drag force, can control the speed of the ejected card. In addition, by being handheld, the angle of ejection can be used to aim the ejected card and indirectly control speed, as well as the orientation of the ejected card when it comes to rest.
