Abstract (en)  
[origin: WO2008064772A1] The invention relates to a sealing device for a swivel motor that comprises an outer part and an inner part and at least one interposed working chamber. Said sealing device seals the working chamber and comprises at least two rectangular sealing elements which have at least one rectangular sealing plate and at least one sealing disk each. The sealing elements are accommodated in respective grooves in the outer and/or inner part, said grooves extending substantially parallel to the swivel axis of the swivel motor.
