Abstract (en)

[origin: WO2008058845A1] In order to improve the exhaust behaviour during tank ventilation, a method for controlling an internal combustion engine (1) is proposed, in which method a lambda regulator (33) of the internal combustion engine (1) is adjusted from a normal regulating mode into a dynamic regulating mode, in which the lambda regulator (33) has greater regulating dynamics than in the normal regulating mode, in such a way that the lambda regulator (33) is in the dynamic regulating mode at least temporarily during the tank ventilation period.
