Abstract (en)
[origin: WO2008065234A1] The invention pertains to the manufacture of inductive components and electric energy filters, particularly it relates to a modular inductive component. The method according to the invention makes it possible to manufacture effectively and flexibly various types of inductive components and the compact filters they comprise. Production logistics can be simplified and in addition products can be easily customised with a variety of added features. Production logistics can be simplified and products can be easily customised with a variety of added features. The manufacturing process of this method is also easy to automate.
