Abstract (en)

[origin: EP2090398A1] The apparatus has a movable piece e.g. free rotation disc (1), for supporting an optical fiber connector, and another movable piece e.g. translatable plate (2), carrying a polishing film, where displacement of the movable pieces is synchronized. The movable pieces are in direct contact through a movement transmitting element e.g. non-skid element, where movement of one of the movable pieces enables movement of the other movable piece. The transmitting element comprises a rubber band, and the plate is demountable from a case (3).
