Abstract (en)
[origin: EP2090411A1] The tool (10) i.e. dowel milling cutter (11), has cross-aligning stop devices (25a, 25b) with cross-aligning stops (26) for lateral contact at a work piece transverse side (27) to determine a transverse distance (48) between the transverse side and a recess (31) in a work piece (24). The devices are moved between stop and resting positions, in which the devices preside and do not preside over a front stop surface (20), respectively. The devices are mounted at a pivoting bearing (47) with respect to the surface in a displaceable manner.
