Abstract (en)

[origin: EP2090432A1] The cylinder (2) has a pair of tensioning elements positioned on a hollow support shaft (5). A pair of force transfer elements is operated with respect to the tensioning elements for selectively clamping and releasing a replaceable printing sleeve (6). An operating mechanism is arranged in inner side of the hollow support shaft and operatively connected to the force transfer elements, and includes an adjustable energy-storage element for tightening and releasing the tensioning elements. A bushing is positioned between an adjustment element and the storage element. Independent claims are also included for the following: (1) a printing unit comprising a housing (2) a method for replacing a printing sleeve arranged in a printing unit of a printing machine.
