Abstract (en)

[origin: US2009214855A1] The invention relates to a floor panel (100), in particular for a laminates floor with a decorative layer and with an overlay paper which has a cellulose layer (10). In order to provide a floor panel (100), which better satisfies the requirements for the overlay film for abrasion resistance and pressing plate protection on the one hand and microscratch-or chafe resistance on the other hand the invention proposes that coarse corundum particles (15) lie on the underside of the cellulose layer (10), i.e. on the side of the cellulose layer (10) facing the decorative layer, and fine corundum particles (13) lie on the upper side of the cellulose layer (10), i.e. on the side of the cellulose layer (10) facing away from the decorative layer.
