Abstract (en)

[origin: EP2090705A1] A frame system comprising a stud (1) with two elongate, interlinked metal profiles (2, 2') arranged mutually slidable along a longitudinal direction in a telescopic manner. Each of the metal profiles has a flange (5, 5'), the two flanges being situated face-to-face when the profiles are interlinked forming two face-to-face flanges. In addition, at least one of these two face-to-face flanges has a brake (19) element extending onto the oppositely facing flange for pressing the two face-to-face flanges away from each other and thereby inducing friction between the two metal profiles along the longitudinal direction.
