Abstract (en)  
[origin: EP2090821A1] The module (1) has a route code cover plate (3) mounted on a mounting support (4) for obtaining an oblique cut beam, and a vacationer cover plate (10) mounted mobile between optically active vacationer and retracted positions. The vacationer cover plate has mobile units (11) movable on the support between the active and retracted positions. A beam cut unit of the plate (10) is driven in translation along a plane vertical or perpendicular to an optical axis of the module, and occults a part of the beam in the active position while conserving an oblique or non-plat cut to the beam.
