Abstract (en)

Described herein is a manually operated call point (1) for fire protection systems, comprising a boxed casing (2), a switch(6) and an LED (7) both positioned inside the boxed casing (2), and a moving activation panel (8) which can be pressed by a user so as to translate along an axis (A) perpendicular to the panel (8) itself, in order to activate the switch(6) and generate an alarm signal; the call point (1) furthermore, comprises a waveguide (9), positioned inside the boxed casing (2), between the LED (7) and the activation panel (8) to confine/direct the light emitted by the LED (7) towards a predetermined area (11)of the activation panel (8) so as to project a ring of light upon the activation panel itself.
