Abstract (en)
[origin: EP2091164A2] A radio receiving apparatus including: a first receiving unit that receives a first broadcast signal broadcast in a first frequency band; a second receiving unit that receives a second broadcast signal broadcast in a second frequency band; a switching unit that switches a program based on the second broadcast signal received by the second receiving unit to output from the output unit, when the first receiving unit ceases to receive the first broadcast signal while a program based on the first broadcast signal received by the first receiving unit is being output from a predetermined output unit; and a restoring unit that performs forced restoration to output the program based on the first broadcast signal from the output unit, when a specific operation is detected to have been performed while the program based on the second broadcast signal switched by the switching unit is being output.
