Abstract (en)
[origin: FR2909860A1] The prosthesis has two elements with an upper plate (1) and a lower plate (2) cooperating respectively with a lower vertebral plate (5) of an upper vertebra (7) and an upper vertebral plate (6) of a lower vertebra (8). The plates are movable one with respect to another by intermediate of an articular interface (10) formed by an upper articular surface (11) and a lower articular surface (12). The surfaces are respectively tapered at pole by surfaces (13, 14) delimiting a mobility space between them, where the space is movable relative to the plate when the surface are cooperated.
