Abstract (en)

[origin: FR2910324A1] A molecule (I) that blocks the inflammatory or immunostimulant activity of interleukin 17 or blocks the action of an interleukin 17 receptor is used to prepare a medicament for inhibiting, preventing or treating stomach cancer. An independent claim is also included for a pharmaceutical composition comprising (I) and a carrier. ACTIVITY : Cytostatic. MECHANISM OF ACTION : Interleukin 17 blocker; Interleukin receptor blocker. Activation of p65 and c-Jun induced by interleukin 17A in AGS human stomach cancer cells was reduced by 97% and 80% respectively when the cells were transfected with small interfering RNA molecules comprising nucleotides 1623-1641 of interleukin 17 receptor A and nucleotides 985-1003 of interleukin 17 receptor C.
