Abstract (en)
[origin: WO2008060217A1] A football goal comprises a framework including two opposite gable frames (10). At its lower end, each gable frame (10) has a beam member (11), which extends in the longitudinal direction of the gable frame (10) and by means of which the gable frame (10) can rest upon a substrate for the goal, and a wheel unit (1A), comprising a wheel (15), movable between an upper inactive position and a lower active position in which it can support a front portion of the gable frame (10) in a state in which said front portion is lifted from said substrate and rests on said wheel (15). The wheel unit (1A) is mounted on the beam member (11) of the gable frame (10) in a manner permitting it to be displaced in the longitudinal direction of the beam member.
