Abstract (en)
[origin: WO2008052758A1] A modular laboratory apparatus for analysis and synthesis of liquids has a liquid container (50), a central evaluation electronic unit (30), a multiplicity of functional modules (40) and a multiplicity of fluid modules (42). The functional modules (40) are arranged in series and mechanically and fluidically connected to one another. At least one fluid module (42) is fluidically connected to the liquid container (50) and to one of the functional modules (40), and provision is made of electrical connections (52) which connect the functional modules (40) and the fluid modules (42) to the central evaluation electronic unit (30). In a method for analysis and synthesis of liquids using a modular laboratory apparatus according to the invention, the functional modules (40) and the fluid modules (42) are controlled by the central evaluation electronic unit (30) by means of an analysis and/or synthesis programme in order to carry out an analysis programme and/or a synthetic programme.
