Abstract (en)

[origin: WO2008058784A1] A method for displaying route information for a navigation system is disclosed, in which method a graphic representation (10) of a digitized map is displayed on a display and the distance (14) which has already been travelled on a route (11) is highlighted on this representation. In order to improve the representation of the route information, the invention provides that as the distance is travelled along velocities are sensed and the highlighting of the distance (14) travelled is carried out as a function of the sensed velocities.
