Abstract (en)

[origin: EP2092848A1] The device (1) has a pivot mechanism including two flaps (15) attached at a holder (12). A control curve element (16) is fastened at the holder, pivotable with the holder around an axis (33), retracted into rollers (20, 21) in a swiveling-in position of the holder, and moves on the rollers during swiveling-out of the holder. An extraction element including the swiveled-out holder with a front cover is extracted from a cupboard element. The holder is locked with the front cover by a locking mechanism (22) in an extraction position of the extraction element in a swiveling-out position.
