Abstract (en)

[origin: EP2092909A1] An arrangement for storing viscous substances, comprises a film carrier (2) with a depression (3) on at least one side, into which the substance can be filled and then covered with a film (4) to form a chamber (5). The chamber has a threshold breakage point (8), which allows the viscous substance to flow out along a channel (9) when pressure is applied. The chamber contains an insert made of a stiff material arranged at an angle. The film consists of a thermoplastic.
