Abstract (en)
[origin: EP2092987A1] The spray gun system (10) has a spray material receiving container (32) and a spray gun (11) with a spray nozzle (30). A shifter unit is provided for switching-on and switching-off a compressed air producing unit. A valve actuating unit is provided for opening and closing a valve unit. The switching unit and the valve actuating unit are constructively matched with each other in such a way that the temporal progression of their actuation relative to each other is defined.
