Abstract (en)  
The invention relates to an improved device for fitting over at least a portion of the housing of a fuel delivery nozzle, in particular a display device for displaying information. The device incorporates a body, a display surface for displaying information, a transparent lid which is hinged to the body, a splashguard and a securing clip. The clip is slideably located in a channel in the body, the channel being angled with respect to the display surface. The securing clip and channel arrangement is thereby suitable for securing to both 'standard' and 'vapour recovery' types of fuel delivery nozzles.
