Abstract (en)

[origin: EP2093329A2] The track production machine has a mounting frame (3), which is connected with a tracked vehicle, a track production unit and two laterally arranged lateral finishers (9). The finisher device comprises a rear finisher (8). The lateral finishers are movably supported in an operating condition by an articulation area. The articulation area comprises a rotary joint, whose rotating axis is aligned transverse to a traction direction of the finisher device.
