Abstract (en)  
[origin: EP2093332A1] A method for constructing a foundation for a structure, which foundation is laid on an unstable surface, the foundation being formed by a floating base, which floating base, in the condition of use thereof, floats on a water-containing layer (3), characterised in that the floating base (2) is made up of - at least two floating layers (7,8), each comprising several elongated blocks at least substantially made of expanded polystyrene (EPS), which abut each other along their long sides, wherein the blocks of the first layer are arranged in crosswise fashion relative to the blocks of the second layer, the blocks of the first layer being arranged so that they are staggered relative to the blocks of the second layer; and - at least one stiffening fabric (10), which is provided on at least one outer side of each of the floating layers.
