Abstract (en)

The device has a locking system including a mobile locking strip (11) that is mobile in parallel translation for being penetrated in a groove (12) of a mobile frame of a glazed panel i.e. mobile panel, in a locked position. The system is actuated by a control mechanism. The mechanism produces a linear displacement of a control rod (23) along a fixed lower frame of an opening e.g. door opening, and transforms the displacement by reference of an angle through transversal displacements of guiding units i.e. tear drops, actuating the strip.

Abstract (fr)

Sur l'élément de cadre d'embrasure (8) sont montés le bloc de commande (19), les blocs de déplacement (20), la tige de commande (23) et la lame guidée (11). La tige de montage (24) permet de mettre en place simultanément les plots (27) et (30). Les mécanismes de renvoi d'angle logés dans les plots (30) des blocs (20), assurent les déplacements de la lame de verrouillage (11) dont le bord supérieur biseauté (18) s'engage en position haute dans la gorge (12) de l'élément de cadre (13).
