Abstract (en)
[origin: EP2093492A2] The equipment has a door unit (64) with a door handle (62) that is rotatably supported around an axis (92). A rotation movement transmission unit (94) transmits rotation movement in cooperation with the door handle in an operating condition. Two spring units (96, 102) are fastened to two fastening regions (100, 104) of a fastening unit (98) of the door unit, respectively, where the fastening region (104) is fixed relative to the axis in an operating process. The transmission unit is fastened to a functional unit (106) in a form fit manner.
