Abstract (en)
[origin: EP2093495A2] The device has a door guiding unit (209) with a guiding surface (210) that is partially formed from plastic. The door guiding unit has a connecting link (44) that is provided to guide a household device-door or to insert larger part of the door into a storage space by a sliding movement. A damping unit is coupled with the door guiding unit in an installed condition. The door guiding unit exhibits a catching unit (216) that fastens the damping unit in the installed condition. The door guiding unit exhibits a partial region that is formed from polypropylene and/or long glass fiber.
