Abstract (en)
[origin: DE202006016885U1] The device has a housing (4) with front and rear walls, where the front wall has a view opening to view a flat object on an object slide (6). The walls have bend lines in a preset distance from connecting lines (7) in such a way that the housing is erectable from a rest position into a viewing position such that the housing has a box-shaped configuration with another front and rear walls (11, 12). The slide is stably connected with the former front and/or rear wall in the region of the connecting lines, which laterally limits the latter front wall (11) in the viewing position of the housing.
